

SDL-1 EASY LATCH BACK

For Trailer Doors

With All New Stainless Steel Latch bar

SDL 1 Easy Latch Back 1/2" Stainless Steel

Safety Door Holdback System

Works well on Reefer and Box Van Trailers

Easy Latch Back

Safety latching device designed to secure hinged doors in an open position against the side of the trailer. The simple operation of the SDL-1 substantially increases proper door latching which substantially decreases the number of dangerous on the job accidents, and helps prevent the costly loss of doors.

Easy To Install

The SDL-1 comes pre-assembled and ruggedly constructed. Drill one 7/8" mounting hole in side of trailer approximately 36" from the end of the trailer, insert the SDL-1 Easy Latch Back, then secure system in place with the included 7/8-14 HD jam nut.

Easy To Maintain

The SDL-1 features a 1/2" stainless steel spring loaded latch bar, plated body, and aluminum fasteners to resist corrosion, and end plug features a grease fitting for long lasting use.

Easy To Use

All types of hinged trailer doors can be secured by the SDL-1. Just pull out the 1/2" stainless steel latch bar and place against the open door or over the bottom of the lock bar (the SDL-1 will need to be mounted appropriately to catch the lock bar). It will hold the door tightly against the side of the trailer and provide better visibility to the back of trailer.

Drivers will use this system!

Use only light weight grease to lubricate the SDL-1.

Rod end can be modified to hook the lock rod.

Weight: 2.56 lbs each

Dimensions: 8.5" X 16.5" long
